“

Growth, for us, has always been about building trust, delivering with responsibility, and creating infrastructure that serves long-term progress. With Best Infra’s proven experience in EPC, energy systems, and reliable project execution, **Best Infra powers smarter and sustainable infrastructure across India**

As utilities advance toward digital transformation, the demand for intelligent and reliable smart metering infrastructure continues to rise. Through BestInfra’s expertise in AMI deployment, system integration, and utility operations, we deliver scalable smart metering solutions that improve energy monitoring, operational efficiency, and consumer transparency enabling smarter and more connected power distribution networks.

Who we are

Best Infra offers advanced energy management and infrastructure solutions that enhance real-time visibility, efficiency, and control.

Advanced Metering Expertise

Delivering smart metering solutions with seamless utility integration for accurate, efficient, and reliable operations.

End-to-End Solutions Support

Delivering end-to-end smart metering solutions, from deployment and connectivity to software and Analytics.

Real-Time Data Visibility

Enabling utilities and consumers with real-time insights for smarter and faster decision-making.

Scalable & Reliable Infrastructure

Built for large-scale deployments with secure connectivity, reliable performance, and long-term stability.

Smart Meter Solutions

At Best Infra, we specialize in delivering cutting-edge smart energy meter solutions designed to revolutionize the way energy is managed and consumed.

Our smart energy meters leverage advanced technologies to provide accurate, real-time data on energy usage, enabling utilities and consumers to make informed decisions, optimize energy consumption, and promote sustainability.

Our Expertise

Advanced Metering Technology

Precision and Accuracy

- Advanced sensors and smart technology enable Best Infra Smart Meter Solutions to ensure accurate utility consumption tracking
- Real-time data recording minimizes errors and provides exact usage metrics.

Multi-Utility Compatibility

- Capable of measuring and managing electricity, gas, and water, including dual-fuel meters.
- Flexible integration with various types of utility systems and infrastructure.

Robust Communication Systems

Versatile Communication Options

- Supports cellular, RF mesh, PLC, and Wi-Fi/Bluetooth communication technologies
- Ensures reliable data transmission across different environments and geographic locations.

Secure Data Transmission

- Implements advanced encryption and authentication protocols to protect data integrity and confidentiality.
- Adheres to industry standards and regulations for data security and privacy.

Managing Complexity In Utilities

Utilities face data complexity, fragmented systems, and consumer distrust.

Across power networks, legacy billing tools and isolated databases prevent real-time visibility.

Manual validation leads to delayed bills, inaccurate readings, and rising technical losses. Stakeholders need an integrated intelligence layer—one that connects field data to financial truth instantly.

Enabling smarter operations, reduced revenue leakage, and enhanced consumer confidence through intelligent data management and real-time visibility.

Best Infra's MDMS delivers that link, empowering utilities to operate with clarity, accuracy, and speed.

What is MDMS

The Digital Core

CONNECTING METERS, CONSUMERS, AND OPERATIONS.

Meter Data Management System (MDMS)

Is the centralized intelligence layer that acquires, validates, processes, and manages real-time data from smart meters and field devices.

Best Infra MDMS

Built for scalability, security, and actionable insight.

Unlike conventional systems, Best Infra MDMS combines end-to-end automation with intuitive dashboards, predictive analytics, and customizable reporting capabilities tailored to client requirements.

Its modular design supports millions of endpoints, integrates easily with existing SCADA/HES, and delivers measurable performance.

99.9% uptime & zero billing errors.

Technology Stack

Modern, secure, and scalable.

At the heart of **Best Infra’s MDMS platform** lies a unified, cloud-ready architecture engineered for performance and reliability.

From high-frequency meter data ingestion to intelligent analytics, every layer is optimized for seamless integration, rapid deployment, and long-term scalability.

FRONTEND	
  	React (Vite) + Tailwind CSS for responsive UI.
BACKEND	
    	Node.js + Express, Go Framework with REST APIs.
DATABASE	
	Using Timescale DB with PostgreSQL for efficient high-frequency time-series data processing.
SERVER / DATA CENTER	
   	AWS cloud or on-premises server deployment for secure and scalable operations.
SECURITY	
  	JWT Authentication, AES-256 encryption, HTTPS Certs.

Core Features at a Glance

Feature Highlights:

Automatic Meter Reading & Data Validation

Seamlessly captures meter data in real time with built-in validation to eliminate manual errors and ensure billing accuracy.

Dynamic Tariff & Billing Engine

Configurable engine that automates tariff logic, multi-slab pricing, and time-of-day billing for every consumer type.

Tamper Detection & Event Alerts

Instantly identifies tampering, outages, or abnormal usage patterns and triggers automated alerts for swift resolution.

High-Usage & Load Forecast Analytics

Provides intelligent consumption insights and predictive load forecasts to optimize grid performance and reduce losses.

Core Features at a Glance

Feature Highlights:

Consumer Portal & Support Ticket

Empowers consumers to raise service requests, track responses, and stay informed through a transparent ticketing system.

Asset & GIS Management

Centralizes asset tracking with GIS-based visualization for complete network visibility and faster field maintenance.

Custom Reports & Notifications

Generate real-time insights, customizable reports, and automated alerts for faster decisions and improved operational efficiency.

Integration with ERP & IoT Systems

Connect ERP platforms and IoT devices for real-time visibility, streamlined operations, and smarter business processes.

Technical Capabilities

- ✓ Built for performance, integration, and automation.
- ✓ Supports 5 million + meters with parallel API threads. Integrates with AMI/HES via secure REST and MQTT protocols.
- ✓ Implements validation rules (duplicate, range, timestamp, missing interval).
- ✓ Automates data reconciliation with billing & finance modules.
- ✓ Provides JSON/CSV exports, cron-based scheduling, and self-healing retry logic.
- ✓ Queue-Based Architecture with producer-consumer workflow ensuring reliable and efficient data processing.

MDMS

Each module operates independently but shares a unified database, maintaining data consistency and traceability.

Secure. Connected. Scalable. Sustainable.

Four-Pillar Foundation of Best Infra's smart metering ecosystem.

Security & Compliance

Data security is not optional—it's architectural.

- ✓ End-to-end TLS encryption, role-based access, and hash-secured APIs with transaction-level audit logs.
- ✓ Compliant with CEA Metering Guidelines and ISO 27001 information-security standards.
- ✓ Regular penetration tests and backup redundancy protect critical data.

Integration Ecosystem

Interoperability that grows with your infrastructure.

- ✓ Interfaces seamlessly with AMI, SCADA, MDAS, and billing ERPs through standard APIs.
- ✓ Supports third-party analytics tools and cloud dashboards.
- ✓ Data exchange formats include JSON, XML, and CSV for vendor neutrality.

Performance & Scalability

Proven reliability under real-world load.

- ✓ Processes 20M+ records daily with sub-2s API response and zero-downtime scaling.
- ✓ Auto backup and data replication across nodes maintain business continuity.
- ✓ 99.9 % uptime verified across multiple projects.

Operational Intelligence & Automation

Real-time monitoring and automation for smarter infrastructure operations.

- ✓ Real-time monitoring and intelligent control for efficient and reliable power operations.
- ✓ Automated fault detection and predictive maintenance to optimize system performance.
- ✓ IoT automation and analytics for smart energy insights.

Benefits & Impact

Technology that delivers operational and financial value.

Benefits	Impacts
 Zero manual billing errors and fast reconciliation	70% Faster billing and reconciliation
 Real-time visibility reduces technical losses	09% Reduction in technical losses
 Enhanced customer satisfaction via transparent data access	65% Improvement in customer satisfaction and transparency
 Lower O&M costs through predictive maintenance.	40% Reduction in operational and maintenance costs
 Automated meter data collection and analytics	55% Reduction in manual intervention

Affiliation & Collaboration

Why Choose Best Infra

Built for Execution.
Backed by Data.
Committed to You.

Let Best Infra be your partner in precision, savings, and sustainable progress.

INTEGRATED EPC + O&M

One team. One system.
No handovers. No gaps.

GENERATION GUARANTEE

Delivering dependable smart
metering performance — every
connection, every time

TIER-1 COMPONENTS ONLY

Certified, tested, and
backed by long-term
warranties.

PROACTIVE SUPPORT MODEL

AMC, predictive maintenance,
and real-time issue resolution
— standard, not optional.

COMPLIANCE & TIMELINESS OBSESSED

CEIG approvals, DISCOM
liaising, net metering — done
on time, every time.

SMART ANALYTICS & INSIGHTS

Advanced data analytics for
consumption monitoring, usage
forecasting, and informed energy
management decisions.

Recognized for Quality. Certified for Trust.
